Press Release

Orgacure closes long-term supply deals with leading Food services

Deals targeting half a million dollar in company revenues.

Rotterdam, Netherlands, October 30, 2017: Orgacure B.V., an agriculture and food science technology company with focus on food waste solutions for farmers, processors and supermarkets, has reported closing of its first series of three-years product supply agreements with renowned food service operators in Germany for its antimicrobial and anti-browning (All-in-One) solution Orgacure to create higher food safety standards and lower food waste within the fresh network of partners. The series constitutes of two agreements with an option for a third agreement and a total purchase value of approximately US\$ 400,000. Orgacure is optimistic with the world's biggest catering firm with some 100,000 tons of fresh produce annually to close another supply deal as the multinational caterer performs well with Orgacure increasing orders year after year.

Food services use Orgacure to clean fresh produce from bacteria and pesticide residues. Orgacure comes as water soluble powder solution to prevent cross-contamination in peeling and slicing operations and sanitizes by washing the final fresh-cut products to reach higher food safety and longer shelf-life and taken together eliminating food waste. In contrast to others Orgacure's patented solution keeps the natural properties of the fresh produce, such as taste and texture untouched. Its unique antimicrobial and anti-browning mode of action (All-in-One) simplifies processing for food operators to make cost-efficiently fresh and safe, yet sustainable food.

"We've grown the organic way and started off with a few ounces of Orgacure powder and supply now tons around the world." says Roger Bierwas, CEO of Orgacure. "Our solution is the value adding key element in the fresh produce value chain and cannot be missed out for safety, nativeness and sustainability in fresh food." says Roger. Orgacure works with all kinds of fresh produce. The company's website application guide lists over thirty fruits and vegetables Orgacure is currently applied on and the list is growing. About 2/3 of Orgacure applies to vegetables and the rest are fruits and other perishable foods. Fresh produce can be washed with Orgacure from just as one cent per kilo fruits and vegetables. "If a food business is unhappy with shelf-life and bottom line Orgacure likes to know to improve the situation with our solution. We stay tuned" says Roger.
